CAPABILITIES STATEMENT

Rofori Corporation is a cybersecurity solutions and software development company, providing services to commercial, not-for-profit, academia, and government organizations. Rofori excels in creating structured data platforms to address the increasing challenges of cybersecurity standards and legislative compliance, across the ecosystem of organizational processes and fragmented collaboration. Rofori offers innovative cloud solutions for assessing operational cybersecurity risk utilizing our Risk Assessment Solutions and cybersecurity talent utilizing our CyberKnights Assessment, Development, and Retention Portal. Our solutions leverage standards, and best practices widely adopted through the National Institute of Standards and Technology frameworks.

We are known for listening and understanding the needs of our clients. We leverage our knowledge, skills and experience to fill the technology and/or process gaps identified and mutually agreed upon with our customers. From these experiences and industry input/feedback, we have developed solutions critical to facing the challenges in the cybersecurity domain, i.e., solutions to help assess both the operational risk and the talent to mitigate the risk.

As a Native American and Veteran Owned Small Business, Rofori is committed to excellence and leveraging our cybersecurity frameworks to create innovative and flexible solutions for our State and Federal clients.

Core Competencies

Our technology experts and subject matter professionals analyze, research, design and implement solutions in the areas of:

- Cybersecurity Resilience Consulting
- Cybersecurity Risk Assessment Solutions
- Cybersecurity Talent Assessment, Development, and Retention Solutions
- Systems Integration to Industry Standards
- Skills Gap Analysis
- Agile Software Development
- Database Architecture Design & Integration
- UX Design & Development
- Video communications training design and development

NIST CSF

Cybersecurity Risk Assessment—NIST CSF

The National Institutes of Standards and Technology (NIST) Cybersecurity Framework (CSF) is a widely adopted approach to managing cyber risk by providing a guide to all businesses on how to implement industry best practices to better protect a business against the growing cyber threat. The NIST CSF offers best practices across the five functions of cybersecurity impacting a business.

The Rofori Cybersecurity Risk Assessment—Cybersecurity Framework (CSF) is a cloud-based solution that helps to reduce risk through assessment and scoring, based on your alignment to the NIST CSF. The NIST CSF is a fundamental component of an organizational risk management process. Risk assessments are used to identify, estimate, and prioritize risk to organizational operations, organizational assets, individuals, other organizations, and the country, resulting from the operation and use of information systems. In accordance with the NIST Cybersecurity Framework, the Rofori Cybersecurity Risk Assessment—Cybersecurity Framework (CSF) lays out the entire framework in an easy-to-use environment that a user can manage an organizations security program. The Risk Assessment enables users to maintain and update the security posture over the course of time in a collaborative environment. Multiple individuals can access this system to continuously update their respective function in an organization and all can quickly see where the organization's vulnerabilities are at any moment in time.

HIPAA RULE

Cybersecurity Risk Assessment- HIPAA Security Rule

The Health Insurance Portability and Accountability Act (HIPAA) Security Rule specifically focuses on safeguarding Electronic Protected Health Information (EPHI). All HIPAA covered entities, which includes some federal agencies, must comply with the HIPAA security rule. HIPAA specifically focuses on protecting the confidentiality, integrity, and availability of EPHI, as defined in the Security Rule. The Rofori Cybersecurity Risk Assessment—HIPAA is a cloud-based solution that helps to reduce risk through assessment and scoring, based on your alignment to the HIPAA Security Rule.

The Rofori Cybersecurity Risk Assessment's inherent and residual risk feature, nested with NIST SP 800-30, enables an organization to assess risk prior to and after mitigation measures are implemented. This feature serves as a core capability that enables an organization's ability to manage risk priorities and risk tolerance. The dashboard enables individuals at all levels of the organization to quickly see the organizational risk in accordance with their preferred cybersecurity standard. The current inherent and residual risk calculation is promptly displayed helping you understand your most critical risks within your organization and serves as a means to focus on implementing proper remediation to protect what is most important.
